Easily move documents and personal settings to a new computer

If you've had a computer for a while, you've probably gotten it set up the way you like. Files are organized a certain way, you have bookmarked a long list of favorite Web sites, and you've customized your desktop just the way you want it.

Those personal settings won't be wiped out when you buy a new computer with Windows® XP. With the Files and Settings Transfer Wizard, it's simple to move your files and settings from one computer to another.

The wizard is located in the System Tools folder. For a command-line version that system administrators can use on multiple computers at once, try the User State Migration Tool (USMT) in the ValueAdd folder.
