Configure Your Server Wizard
Preliminary Steps
You can ensure that you successfully configure your server by completing the following steps before continuing.
Before continuing, verify that the following steps have been completed.
Install all modems and network cards.
Attach all necessary cables.
If you plan to use this server for Internet connectivity, connect to the Internet now.
Turn on all peripherals, such as printers and external drives.
Have your Windows Server 2003 Setup CD available, or know your network installation path.
When you click Next, the wizard will search for network connections.

Operating System Compatibility
Improved security settings in Windows Server 2003 affect older versions of Windows.
Domain controllers running Windows Server 2003 implement security settings that require clients and other servers to communicate with those domain controllers in a more secure way.
Some older versions of Windows, including Windows 95 and Windows NT 4.0 SP3 or earlier, do not meet these requirements. Similarly, some non-Windows systems, including Apple Mac OS X and SAMBA clients, might not meet these requirements.
For more information, see Compatibility Help.

Domain Controller Type
Specify the role you want this server to have.
Do you want this server to become a domain controller for a new domain or an additional domain controller for an existing domain?
Domain controller for a new domain
Select this option to create a new child domain, new domain tree, or new forest. This server will become the first domain controller in the new domain.
Additional domain controller for an existing domain
Proceeding with this option will delete all local accounts on this server.
All cryptographic keys will be deleted and should be exported before continuing.
All encrypted data, such as EFS-encrypted files or e-mail, should be decrypted before continuing or it will be permanently inaccessible.

Create New Domain
Select which type of domain to create.
Create a new:
Domain in a new forest
Select this option if this is the first domain in your organization or if you want the new domain to be completely independent of your current forest.
Child domain in an existing domain tree
If you want the new domain to be a child of an existing domain, select this option. For example, you could create a new domain named headquarters.example.microsoft.com as a child domain of the domain example.microsoft.com.
Domain tree in an existing forest
If you don't want the new domain to be a child of an existing domain, select this option. This will create a new domain tree that is separate from any existing trees.

DNS Registration Diagnostics
Verify DNS support, or install DNS on this computer.
Diagnostic Failed
The registration diagnostic has been run 1 time.
Warning: Domain Controller functions like joining a domain, logging onto a domain, and Active Directory replication will not be available until the DNS infrastructure for Active Directory is correctly configured.
The DNS zone authoritative for the domain lahun.local cannot be updated because it is the DNS root zone. Domain controllers will not send dynamic updates to the DNS root zone. If you want to use this domain name, select 'Install and configure the DNS server on this computer' below and create a delegation for the new DNS
I have corrected the problem. Perform the DNS diagnostic test again.
Install and configure the DNS server on this computer, and set this computer to use this DNS server as its preferred DNS server.
I will correct the problem later by configuring DNS manually. (Advanced)

Manage Your Server
Server: L15-SERVER2003
Search Help and Support Center
Active Directory Installation Wizard
Summary
Review and confirm the options you selected.
You chose to:
Configure this server as the first domain controller in a new forest of domain trees.
The new domain name is lahun.local. This is also the name of the new forest.
The NetBIOS name of the domain is LAHUN
Database folder: C:\WINDOWS\NTDS
Log file folder: C:\WINDOWS\NTDS
SYSVOL folder: C:\WINDOWS\SYSVOL
The DNS service will be installed and configured on this computer. This computer will be configured to use this DNS server as its preferred DNS server.
To change an option, click Back. To begin the operation, click Next.

Configure Your Server Wizard
Preliminary Steps
You can ensure that you successfully configure your server by completing the following steps before continuing.
Before continuing, verify that the following steps have been completed.
Install all modems and network cards.
Attach all necessary cables.
If you plan to use this server for Internet connectivity, connect to the Internet now.
Turn on all peripherals, such as printers and external drives.
Have your Windows Server 2003 Setup CD available, or know your network installation path.
When you click Next, the wizard will search for network connections.
